

Optimal Merge Pattern - Greedy Method

given 2 sorted lists		combined	
A	B	C	
3	5	3	compared one by one
8	9	5	
12	11	8	
20	16	11	
m	n	12	time $O(m+n)$
		16	so $O(8)$ in this scenario
		20	

what about more than 2 lists?

List \rightarrow	A	B	C	D
size \rightarrow	6	5	2	3

two way merging (2 lists at time)

total merging cost
 $11 + 13 + 16 = 40$

other way

total cost: $11 + 5 + 16 = 32$

many possibilities

merge pair of smallest size lists.

best
 cost = $16 + 10 + 5 = 31$

Optimal Merge Pattern

list $\rightarrow x_1 \quad x_2 \quad x_3 \quad x_4 \quad x_5$
sizes $\rightarrow 20 \quad 30 \quad 10 \quad 5 \quad 30$

cost: $15 + 35 + 95 + 60 = 205$

distances: $3 \times 5 + 3 \times 10 + 2 \times 20 + 2 \times 30 + 2 \times 30 = 205$

$$\sum d_i \times x_i$$
